# T-KOMPOST

The first pourer with a  
**100% compostable top**

## Supercap presents the new T-Kompost combining innovation and sustainability

When it comes to oil and vinegar, it is essential that each closure preserves the precious contents of each bottle, that is the fruit of a long experience and tradition. That's why Supercap has created a specific line for these products, developing every day its expertise and efficiency. Indeed, the dynamic world of packaging is constantly developing and today more than ever it plays a crucial role in the field of sustainability and respect for our environment. Thus, research and engineering know-how have enabled Supercap to design the new T-Kompost: the first pourer for oil and vinegar with a 100% compostable top. The product is certified by TUV AUSTRIA Belgium NV and its top is made from

100% compostable materials: a real innovation in the world of pourers. Indeed, Supercap T-Kompost allows the consumers to throw the top of each bottle in the compost bin, actively contributing to the reduction of environmental impact and air pollution. T-Kompost is not only a new product to add to Supercap already wide range of sustainable products, but a tangible example of our philosophy called "With Future Inside", which aims at innovation with an eye to the future and its protection. Besides its sustainable products, Supercap is also daily committed to reduce its environmental impact throughout its entire manufacturing process. A concrete example is the installation of a wide photovoltaic plant, whose capacity is able to offset more than 50% of the company's energy consumption.
